SKILLSET

Primary Skills: Machine Learning, Deep Learning, LLM Engineering, Data Analysis, Business Intelligence, MLOps, Forecasting, Data Engineering, Transport Optimization (Operations Research).

Programming Languages: Python, SQL, COBOL, JCL.

Cloud: GCP, Azure.

OS: Windows, Linux, Mac Os.

ML/DL Libraries/Frameworks: Scikit-learn, Pandas, Matplotlib, TensorFlow, Keras, PyTorch, Jupyter, Unsloth, Transformers, Peft, Cuda etc.

ML/LLM Model Training: Experience with Cloud, On-Premises, GPU,

PROFILE

With 10+ years of hands-on experience, I thrive at the intersection of data science, machine learning engineering, and MLOps. My journey spans diverse domains, from predictive modeling, optimization, forecasting, Computer Vision, Natural language processing to business intelligence. As a Microsoft/Oracle/Google-certified AI/ML/Data Science Practitioner with 5+ certifications, I'm passionate about creating intelligent systems that drive real-world solutions.

Cloud Proficiency: Navigating both Azure and Google Cloud Platform, I craft robust solutions that deliver results.

Project Impact:

Generative AI & LLM Ops

- Leading deployment and operations of **self-hosted open-source Large Language Models (LLMs)**.
- Engineering scalable solutions for generative AI applications.
- **Result:** Improved self-reliance and stronger data governance.

AI at Scale for Retail Fraud Detection

- Engineering and operating AI systems that process and transform **millions of transactional events**.
- Enabling fraud prediction across multiple stages of the retail lifecycle.
- **Result:** Early fraud detection reduced financial losses, and improved risk mitigation.

Cybersecurity with GPU Acceleration

- Engineering and operating ML solutions for cybersecurity using **GPU acceleration**.

and Distributed Training.

ML Model Packaging: Sheldon Core, Docker, Fast API, Flask, GCP & Azure Artifact Registry.

ML/LLM Model Deployment: Kubernetes, vLLM Framework etc.

ML Lifecycle Management: MLFlow (On-premises), GCP Vertex AI & Azure ML Studio (On Cloud).

ML Workflow/Pipeline Orchestration: Google Vertex AI Pipelines, Azure ML Pipelines, Google Cloud Build, Airflow, Google Data Flow, Kubeflow Pipelines, Azure Logic Apps, Azure Function Apps, Google Cloud Function, Google Pub/Sub.

Code Repository Management: GitHub, Azure Repos, Google Source Repo.

GPU Libraries: Rapids Libraries (cuDF, CuPy)

Visualization & Observability: Power BI, Grafana, Prometheus, ELK Stack, Google cloud monitoring

MLOps & CI/CD Tools: Azure DevOps, Google Cloud Build, GitHub Workflows.

Database: MS SQL Server, IBM DB2

- Optimizing both training and inference pipelines.
- **Result:** Faster threat detection and improved response times.

Supply Chain Optimisation Simulation Framework

- Led a cross-functional team to develop a simulation framework for supply chain optimization.
- **Result:** Identification of strategic hub locations and improved distribution efficiency.

Vehicle Routing Optimisation & Transportation Cost Reduction

- Spearheaded last-mile delivery optimization using **OR-Tools**.
- Improved route planning, departure scheduling, and product loading.
- **Outcome:** More efficient routes, better resource utilization, and significant annual cost savings.

Quality Prediction in Supply Chain

- Guided development of ML models to predict product quality.
- **Benefit:** Improved inspection efficiency and increased customer satisfaction.

Computer Vision for Semiconductor Defect Detection

- Led the design of computer vision solutions for manufacturing defect detection.
- **Outcome:** Enhanced product quality and reduced production losses.

EDUCATION HISTORY

- Bachelor of Engineering, Electrical and Electronics, April 2012 – April 2016, Andhra University, Visakhapatnam.

CERTIFICATIONS

- Oracle Cloud Infrastructure Generative AI Certified Professional
- Microsoft Certified: Azure AI Engineer Associate
- Microsoft Certified: Azure Data Scientist Associate
- Microsoft Certified: Power BI Data Analyst Associate
- Microsoft Certified: Power Platform Fundamentals
- Neural Networks and Deep Learning – Coursera (BDM2BNURLW6M)

WORK EXPERIENCE

Lead Artificial Intelligence Engineer, Best Buy, Jul 2025 – Present

- Leading the design and productionalization of Generative AI and LLM-based solutions, partnering with Data Science teams to deploy high-availability, low-latency training and inference systems on GCP, supporting large-scale retail use cases such as search, personalization, fraud detection, and cybersecurity.

ML Lead Engineer (Machine Learning Engineering and Operations), Wipro, Aug 2023 – Jul 2025

- Lead a team in developing advanced AI/ML solutions to address intricate challenges in cybersecurity and fraud detection utilizing GCP ML Capabilities and on-premises GPU Accelerated Computing (NVIDIA's DGX Server) for a retail giant in USA.

Application Development Team Lead – Data Science/Azure Machine Learning, Accenture, May 2021 – Aug 2023

- Led a team in designing and implementing supply chain optimization, simulation and quality control systems using techniques of operations research, data science, machine learning, etc. The end goal was to provide valuable business insights and increase efficiency in the value chain, thereby saving costs, improving product freshness, and reducing the global carbon footprint.

Data Scientist, GD Research Centre Pvt Ltd, May 2020 – May 2021

- Conducted comprehensive data research, analysis, and extracted insights using a diverse range of visualization tools and machine learning and data science concepts. Additionally, I played a key role in developing and deploying a forecasting system that predicted company-wide data across multiple intelligence centers.

Systems Engineer, Tata Consultancy Services, Jul 2019 – Mar 2020

- Developed a hybrid (cloud + on-prem) computer vision application for a multi-class image classification problem. Leveraging transfer learning techniques, I successfully deployed a fully functional solution at the manufacturing site.

Senior System Engineer, Infosys, May 2016 – Jul 2019

- Developed Business Intelligence applications that encompassed a Lead Conversion Prediction system, leveraging Microsoft BI tools and incorporating Machine Learning concepts.
-

FEW KEY PROJECTS

Project	Description	Result/Outcome
LLM Finetuning Framework	Designed and built a config-driven framework for LoRA adapter fine-tuning of open-source causal language models, enabling rapid experimentation and production deployment of fine-tuned LLMs for classification, information	solution significantly reduced reliance on external APIs, strengthening data governance, privacy, and compliance while delivering meaningful cost savings. The framework accelerated time-to-value for use cases such as

	extraction, and free-form generation tasks.	classification, information extraction, and text generation, and established a scalable, repeatable foundation for future Generative AI initiatives.
Enhancing Cybersecurity with GPU Acceleration	Engineering and Operating ML solutions in Cybersecurity harnessing and fraud detection using GPUs for accelerated computing for problems such as Phishing email detection, digital fingerprinting for malware detection, and managing reported emails to ensure faster review and action.	Enhanced threat detection capabilities, streamlined threat routing for faster review and action, facilitated reporting of scammers to authorities and reduce brand infringement, and continuously monitored AWS account activity for cyber threats from nefarious actors.
Supply Chain Optimization simulation framework	Spearheaded developing a simulation program to optimize the supply chain, implemented an Operations research solution for optimizing route planning, departure scheduling, Product loading etc.	Identified strategic hub locations and improved distribution efficiency. More efficient routes and better resource utilization for timely deliveries resulting in significant annual cost savings
Quality Prediction in Supply Chain	Developed and operationalized end to end machine learning model to predict the quality of goods arriving at a warehouse.	Enhanced inspection efficiency and improved customer satisfaction.
Computer Vision for Semiconductor Defect Detection	Led the design of a computer vision application to detect defects in semiconductor manufacturing.	Enhanced product quality and reduced production losses. Reduced Manual effort.
Forecasting Metrics Across Industries	Implemented a robust time series forecasting system to forecast data across diverse domains.	Informed strategic decisions and resource allocation.
